# <u>WEEK - 8</u>

**NAME:** DHARUN.G

REG NO: 240701125

Coders here is a simple task for you, you have given an array of size <b>N</b> and an integer <b>M</b> .
Your task is to calculate the difference between maximum sum and minimum sum of N-M elements of the given array.
Constraints:
1<=t<=10
1<=n<=1000
1<=a[i]<=1000
Input:
First line contains an integer <b>7</b> denoting the number of testcases.
First line of every testcase contains two integer <b>N</b> and <b>M</b> .
Next line contains <b>N</b> space separated integers denoting the elements of array
Output:
For every test case print your answer in new line
SAMPLE INPUT
1
51
12345
SAMPLE OUTPUT
4
Explanation
M is 1 and N is 5 so you have to calculate maximum and minimum sum using (5-1 =) 4 elements.
Maximum sum using the 4 elements would be (2+3+4+5=)14.
Minimum sum using the 4 elements would be (1+2+3+4=)10.
Difference will be 14-10=4.

```
#include<stdio.h>
 2 ,
     int main(){
 3
         int t;
         scanf("%d",&t);
 4
 5,
         while(t--){
 6
             int n,m,d,min,temp;
 7
             scanf("%d %d",&n,&m);
 8
             d=n-m;
 9
             int arr[n];
10 •
             for(int i=0;i<n;i++){</pre>
                  scanf("%d",&arr[i]);
11
12
             }
13 ,
             for(int j=0;j<n;j++){</pre>
14
                 min=j;
                  for(int k=j;k<n;k++){</pre>
15
16
                      if(arr[k]<arr[min])</pre>
17
                      min=k;
                  }
18
19
                  temp=arr[min];
                  arr[min]=arr[j];
20
21
                  arr[j]=temp;
22
23
             int maxsum=0,minsum=0;
24
             for(int a=0;a<d;a++)</pre>
25
             minsum+=arr[a];
26
             for(int b=n-1;b>m-1;b--)
27
             maxsum+=arr[b];
             printf("%d\n",maxsum-minsum);
28
29
    }
30
```

	Input	Expected	Got	
~	1 5 1 1 2 3 4 5	4	4	~

A new deadly virus has infected large population of a planet. A brilliant scientist has discovered a new strain of virus which can cure this disease. Vaccine produced from this virus has various strength depending on midichlorians count. A person is cured only if midichlorians count in vaccine batch is more than midichlorians count of person. A doctor receives a new set of report which contains midichlorians count of each infected patient, Practo stores all vaccine doctor has and their midichlorians count. You need to determine if doctor can save all patients with the vaccines he has. The number of vaccines and patients are equal.  Input Format  First line contains the number of vaccines - N. Second line contains N integers, which are strength of vaccines. Third line contains N integers, which are midichlorians count of patients.  Output Format  Print a single line containing 'Yes' or 'No'.  Input Constraint

You are given an array of n integer numbers  $a_1, a_2, \ldots, a_n$ . Calculate the number of pair of indices (i, j) such that  $1 \le i < j \le n$  and  $a_i$  xor  $a_j = 0$ .

## Input format

- First line:  $\mathbf{n}$  denoting the number of array elements
- Second line: n space separated integers  $a_1, a_2, \ldots, a_n$ .

#### **Output format**

Output the required number of pairs.

#### Constraints

```
1 \le n \le 10^61 \le a_i \le 10^9
```

#### SAMPLE INPUT

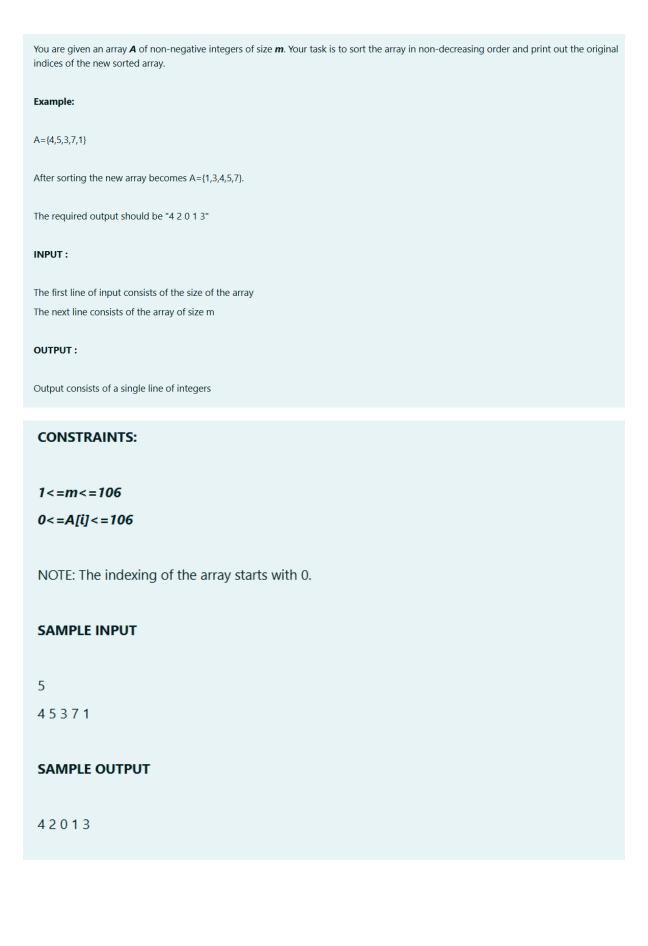

5 13143

## SAMPLE OUTPUT

\_

```
